## **West Nile Virus Confirmed in Mosquito Sample from Beverly**

**DATE:** August 31, 2018

**CONTACT:** William T. Burke

**TELEPHONE:** 978-921-8591

The Massachusetts Department of Public Health (MDPH) announced today that West Nile Virus (WNV) has been detected in a mosquito sample collected from Beverly. In 2017, 5,496 mosquito samples were tested for WNV and 290 samples were positive.

WNV is most commonly transmitted to humans by the bite of an infected mosquito. The mosquitoes that carry this virus are common throughout the state, and are found in urban as well as more rural areas. While WNV can infect people of all ages, people over the age of 50 are at higher risk for severe infection. **Please note that there have been no human or animal cases of West Nile virus identified in Beverly this year.**

**By taking a few, common-sense precautions, people can help to protect themselves and their loved ones:**

### **Avoid Mosquito Bites**

- **Be Aware of Peak Mosquito Hours** - The hours from dusk to dawn are peak biting times for many mosquitoes. Consider rescheduling outdoor activities that occur during evening or early morning. If you are outdoors and notice mosquitoes around you, take steps to avoid being bitten by moving indoors, covering up and/or wearing repellent.
- **Clothing Can Help** reduce mosquito bites. Wearing long-sleeves, long pants and socks when outdoors will help keep mosquitoes away from your skin.
- **Apply Insect Repellent** when you go outdoors. Use a repellent with **DEET** (N, N-diethyl-m-toluamide), **permethrin**, **picaridin** (KBR 3023), **IR3535** or **oil of lemon eucalyptus** [p-methane 3, 8-diol (PMD)] 8-diol (PMD)] according to the instructions on the product label. DEET products should not be used on infants under two months of age and should be used in concentrations of 30% or less on older children. Oil of lemon eucalyptus should not be used on children under three years of age. Permethrin products are intended for use on items such as clothing, shoes, bed nets and camping gear and should not be applied to skin.

### **Mosquito-Proof Your Home**

- **Drain Standing Water** – Many mosquitoes lay their eggs in standing water. Limit the number of places around your home for mosquitoes to breed by either draining or getting rid of items that hold water. Check rain gutters and drains. Empty any unused flowerpots and wading pools, and change water in birdbaths frequently.
- **Install or Repair Screens** - Some mosquitoes like to come indoors. Keep them outside by having tightly-fitting screens on all of your windows and doors.

The City of Beverly has worked closely with the Massachusetts Department of Public Health and the Northeast Massachusetts Mosquito Control District throughout this season to reduce the risk of illness spread by mosquitoes. Mosquito pools are tested twice weekly from May to September in order to help identify infected mosquitoes. In addition, larvicide treatment of catch basins (where certain mosquitoes lay their eggs) was performed throughout the City, and targeted spraying for mosquitoes will be considered.

Information about WNV and reports of current and historical WNV virus activity in Massachusetts can be found on the MDPH website at [www.mass.gov/dph/mosquito](http://www.mass.gov/dph/mosquito).
